

Docket No. AUS920030442US1

ABSTRACT OF THE DISCLOSURE

**SYSTEM, APPARATUS AND METHOD OF RESCINDING PREVIOUSLY
TRANSMITTED E-MAIL MESSAGES**

5

An apparatus, system and method of rescinding previously transmitted e-mail messages are provided. After
10 a sender composes an e-mail message, the message may be stored on a computing system when it is sent to the recipients. As customary, the e-mail message may contain a list of recipients to whom it is to be sent. A notification message is then generated and sent to the recipients (and to
15 the sender) instead of the actual e-mail message. The notification message allows the recipients to automatically access the stored e-mail message. When and if the sender decides to rescind the message, the user may access the message and modify the list of recipients to exclude any
20 number of recipients as well as to modify the text of the e-mail message. Any recipient whose e-mail address has been excluded will not be allowed to access the e-mail message.
